

RandDTax offers a specialist consultancy service, that is totally independent. We work with your existing tax accountants so there is no conflict of interest. Many of our clients are introduced to us by their accountants.

Benefits:

- Vast industry sector expertise.
- 100% success rate over 12 years.
- Our business model, low overheads and well established methods help us remain the least expensive consultancy in the sector.
- Over 2000 successful project claims.
- We take the pain away from the claim.
- Strong in identifying technological and scientific advances and uncertainties.
- Able to uncover maximum qualifying R&D expenditure.
- No fee if claim unsuccessful.

"We have introduced several of our Clients to RandDTax. They have been delighted with the efficient service and support in maximising their claims.

We find RandDTax responsive, supportive and they really work well, alongside us, re-enforcing the service we offer to our Clients."

Steve Butler BA (Hons), FCA,
Partner, Haines Watts Accountants

R&D Tax Credits

Making a massive contribution to funding innovation

- Do you recognise qualifying R&D in your organisation?
- Are you claiming all you are entitled to claim?
- Is the cost of claiming too high?
- Is claiming too time consuming?

We can help.

www.RandDTax.co.uk

Minimum Risk **Maximum Gain**

Case Studies continued:

- A financial services business able to successfully compete with innovative products and web software based marketing/sales methods.
- A number of innovative brewing companies developing new products and production processes.
- A firm of bailiffs able to develop portable and web based systems which transform operational processes, efficiency and cash collection rates.
- A software development tools company developing an innovative development platform.
- A number of injection moulding companies specialising in developing the tooling and manufacturing processes to address very complex moulding challenges, creating innovative products and components.
- A number of companies developing innovative, low cost web hosting services.
- A number of conveyor design and manufacturing companies creating innovative conveyor systems and controls.
- A highly successful electronics manufacturer winning significant international business, through more innovative designs, materials and manufacturing processes.

Many of the audits we carry out on previous R&D Tax Credit claims show that companies have underestimated the qualifying expenditure – therefore the full financial benefit has not been obtained. We can help you check this out before it is too late to correct it – with a fee only being charged where underclaiming is successfully corrected.

Recognising and scoping R&D for Tax Credits requires detailed knowledge of HMRC Guidelines and wide experience of making successful claims. Our Consultants have been 100% successful in dealing with claims relating to well in excess of 2,000 projects since 2002. Since September 2012, RandTax has successfully gained more than £7.5m for in excess of 220 clients covering close to 500 claims. The company has 27 Consultants providing full UK coverage. Our aim is to be a quality service provider with the lowest cost model. With typical fees in the marketplace ranging from 20% to 40% our fees remain the most competitive in the sector.

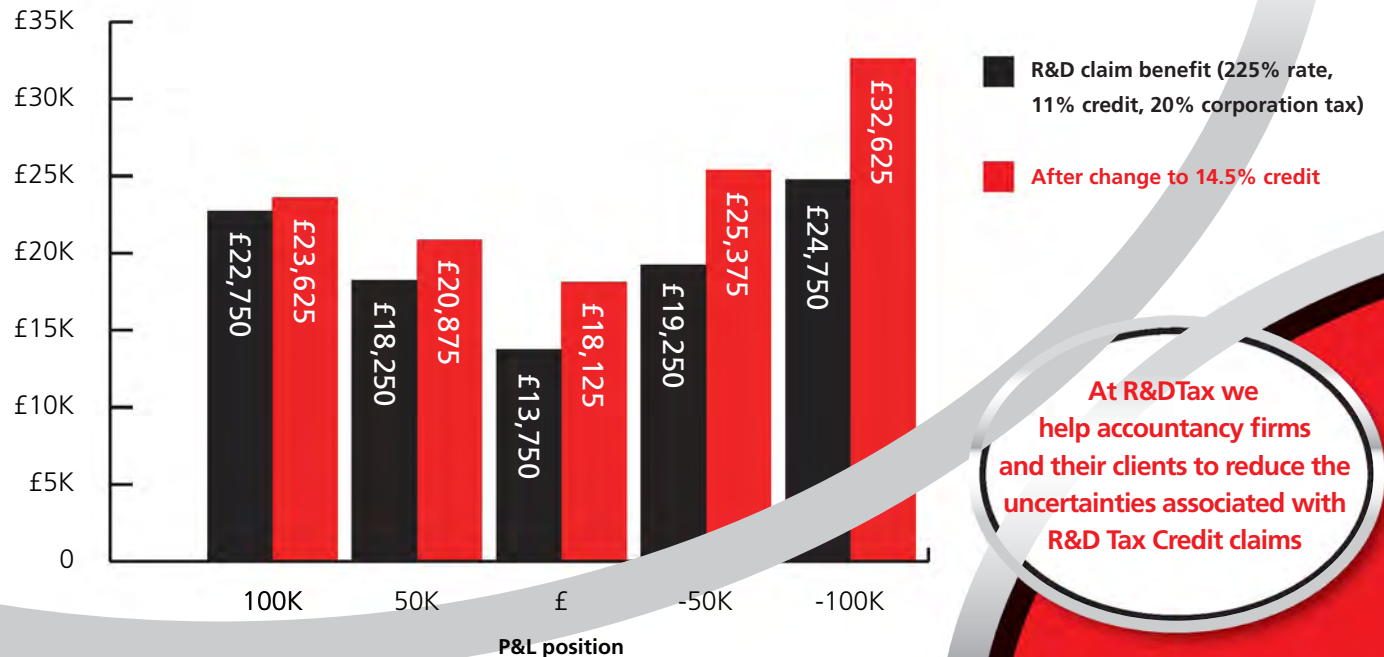

R&D Tax Credits can be claimed by almost any limited company investing in creating better products, processes, services, materials or devices.

Here are a few example case studies, some of which may not seem that obvious:

- A legal company developing award winning, innovative, paperless conveyancing processes.
- A test and calibration specialist developing an innovative air flow testing device and new deep cleaning processes for heat exchangers.
- Numerous companies developing innovative ICT based systems to transform commerce and business processes.
- A construction company developing project and work control systems using mobile and internet technologies to transform processes and profitability, in managing large refurbishment contracts.
- A winch design and manufacturing company, developing innovative solutions where none were previously available.

2014 Budget **Big Increase in Benefit for SMEs**

R&D Tax claim benefit based on £100k qualifying expenditure, across 5 P&L positions.

At R&DTax we help accountancy firms and their clients to reduce the uncertainties associated with R&D Tax Credit claims
